Pedagogy-driven corpus-based lexicogrammar

Costas Gabrielatos
Edge Hill University
Motivation

PedMats (especially grammars and coursebooks) often provide partial, inaccurate, or misleading information.

PedMats tend to be informed by previous PedMats and/or RefMats – not CL research.

Each time I examined a language feature with a TALC focus, I realised that existing theoretical constructs or classifications needed to be revised.

• Lexicogrammatical patterns of *(BE) interested* – and modality (Gabrielatos, 2015, 2018)
Focus

• TALC and ...
  – pedagogical materials
  – reference materials
  – theoretical frameworks / constructs
  – primary research on L1

• Lexicogrammar: conceptions
  – Lexicogrammar and Lexical Grammar
  – Compartmentalisation in RefMats and PedMats

• Pedagogical lexicograms
TALC: the cast

• L1 corpora (different types)
• L2 corpora (different levels and types)
• RefMats
  – reference grammars (e.g. Quirk et al. 1985, Biber et al. 1999)
  – dictionaries for L1 users
• PedMats
  Information: coverage, presence, absence, prominence, accuracy
  – pedagogical grammars
  – dictionaries for L2 users
  – syllabuses: coursebooks / textbooks
  – syllabuses: language tests/exams
TALC research aims and strands

TALC aims to contribute to
• FL/SL/translation learning and teaching (DDL)
• SLA
• Pedagogical materials
• Language testing

TALC research examines
• Learner Language
  – frequency and accuracy (errors)
  – at different levels of proficiency and/or time points
  – In different contexts of use (e.g. classroom interaction, testing)
  – in relation to L1 use, RefMats, PedMats
  – in relation to the learners’ L1
• PedMats in comparison to L1 use
• DDL: corpora as teaching/learning materials
Interrelated aspects shared by all strands

• Application of theory
• Reliance on RefMats

Theoretical orientation influences
⇒ Unit of analysis
⇒ Classifications
⇒ Decisions on what constitutes an error. Who is the arbiter of accuracy?
  – PedMats?
  – RefMats?
  – L1 use? ⇒ CL studies?
Why not just consult RefMats?

• Most do not provide frequency information
  – Those who do are not comprehensive in their coverage (e.g. Biber et al., 1999)

• Lexicogrammatical information not normally / consistently provided
  – lexis and grammar treated in compartmentalised fashion

• Information / classifications may not
  – be informed by corpus-based studies
  – have internal consistency
  – account for all corpus instances
RefMats and informing sources: Types

**Corpus-based**
- Based on analysis of appropriate representative corpus (sample).
- Adhere to the principle of total accountability.
- Provide quantitative and distributional information.

**Data-informed / Corpus-informed**
- Use attested/corpus examples.
- Examples selected ad hoc → no claim to representativeness.
- Cannot provide (reliable) quantitative and distributional information.

**Introspective**
- Examples derived from (and very probably reflecting) the analyst’s introspections and/or preferred theory.

(Gabrielatos, 2010: 11-12)
Lexicogrammar

• Lexis and grammar seen as “complementary perspectives” (1991: 32)

• Lexicogrammatical continuum (1991)

• “[I]f you interrogate the system grammatically you will get grammar-like answers and if you interrogate it lexically you get lexis-like answers” (1992: 64).
Lexical Grammar

• Posited the *idiom principle* (exemplified by *collocation*), which operates alongside the *open-choice principle* (words fill in particular syntactic positions).

• The idiom principle accounts for “the restraints that are not captured by the open-choice model” (1991: 115) – later formalised as *Lexical Grammar* (2004).

• Collocation is defined as “a purely lexical relation, non-directional and probabilistic, which ignores any syntactic relation between the words” (Stubbs, 2001: 64).
However ...

Halliday on Sinclair’s approach:
• He is “tunnelling through the system interrogating it lexically while moving further and further towards the grammatical end” (1992: 64) in order to identify aspects of language use that cannot be derived from a purely grammatical analysis (1966: 410).

Sinclair on Halliday’s approach:
• Lexicogrammar is “fundamentally grammar with a certain amount of attention to lexical patterns within the grammatical frameworks; it is not in any sense an attempt to build together a grammar and lexis on an equal basis.” (2004: 164).
However ...

No/little consideration of the open choice principle in subsequent studies on Lexical Grammar.

Components of the *lexical item* (Sinclair, 1996: 75; Stubbs, 2009: 123-126):
- the core (i.e. a word or phrase)
- its collocates
- its semantic preference
- its semantic prosody
- its colligations

(Grey = optional component)
However ...

Colligation was redefined in a manner consistent with LG tenets.

Original definition
• “The statement of meaning at the grammatical level is in terms of word and sentence classes or of similar categories and of the interrelation of those categories in colligations. Grammatical relations should not be regarded as relations between words as such – between watched and him in ‘I watched him’ – but between a personal pronoun, first person singular nominative, the past tense.” (Firth, 1968: 181)

Re-definition
• “[T]he grammatical company a word keeps” (Hoey, 1997: 8),
• “[T]he relation between content and function words, and between words and grammatical categories” (Stubbs, 2002: 238).
So ...

Main features of Lexical Grammar

⇒ Primacy of lexis

⇒ Lexis and grammar not treated “on an equal basis”
However ...

• Collocation is defined as the co-occurrence of word-forms, as different forms of a word can have different sets of collocates (e.g. Sinclair, 1991: 53-56).

• But this can be re-stated as ‘morphological marking affects collocation patterns’.

Collocation is not purely lexical, but is influenced by grammar.

(Gabrielatos, 2018: 244)
Findings from corpus studies

if-conditionals: classification and modal load

(*BE*) interested: lexicogrammatical patterns and modality
Classification of conditionals

• None of the classifications in RefMats accounted for all BNC instances.

• Big Grammars still present classifications characterised by all/most of the following:
  – restricted to degree of likelihood expressed -- ignoring other modal notions: ability, volition, obligation/permission
  – ignoring embedded modalities (modality modifying modality)
  – ignoring the type of syntactic link between protasis and apodosis
  – ignoring complex or atypical conditionals

(Gabrielatos, 2010)
• If physicists had tried to discover a way to release nuclear energy before 1939, they would have worked on anything else rather than the field which finally led to the discovery of fission, namely radiochemistry. [B78 1973]

• If I can live with them, so can everyone else. [FS9 2538]

• This is the best "bargain offer" pensioners have ever had, and any woman over 60 or man over 65 should take advantage of it if possible. [C8Y 946]

• If anything can be salvaged from the tragedy it’s hoped the publicity surrounding his death will help his work become more well known. [K21 3757]
If you should decide to concentrate on one particular nursing specialty then you will probably want to undertake a clinical nursing studies course. [CHT 248]

Companies potentially need to acquire information about all the environmental factors shown in the diagram, if they are to survive and prosper. [B15 636]
Different types of syntactic link

Direct: subordinate part is an adjunct
Indirect: subordinate part is a style disjunct

(Quirk et al., 1985: 1071-1072)

Direct
• If we can assemble a package of cash, stock options, and newly issued shares as a good inducement, I think we'll convince the key manager and he'll persuade the others to sell. [FPB 108]

Indirect
• If antibiotics are likely to clear up the infection, why are we having this long discussion? [CH1 5292]
• He's not a bad sort for a brother if you know what I mean [AN7 3257]
Embedded conditionals

[I]f a producer controls the production of a given commodity he is a monopolist -- if he is such -- not by virtue of any entrepreneurial role, but as a result of a resource monopoly. [HH2 743]

They are people whom we rarely consider in this House, but when there is a suicide or accident on the railway, the driver, and his mate if appropriate, may be mentally scarred for life by the experience. [HHX 119]
Untypical conditionals: non-contiguous

Abdomen: When to seek advice
Urgently, Right now!

If the stool is bloody, black or tar-like.

[B1R 681]

– "You intend to reside there ... wherever ... for some time?"
– "If I like it."

[FPD 1593]
Limitations of collocation as ‘purely lexical’

• The word *if* is not a ‘free agent’; it is part of a very small number of structures.
  – On its own: conditional, indirect interrogative.
  – As part of a MWU: conditional-concessive (*even if*), comparison (*as if*).

• In the written BNC, about 85% of *if* tokens are subordinators of conditionals.

⇒ A grammar-independent (bag of words) collocation analysis would essentially mirror the collocations of *if* in conditionals.

⇒ Examination of modal load (ML) in subordinate clauses (as a proxy for collocation analysis ⇒ semantic preference)
### Modal Load

<table>
<thead>
<tr>
<th></th>
<th>Modal Density</th>
<th>Modalisation Spread</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Definition</strong></td>
<td>Average number of modal markings per clause.</td>
<td>Proportion of constructions that carry at least one modal marking.</td>
</tr>
<tr>
<td><strong>Expression</strong></td>
<td>Number of modal markings per 100 clauses.</td>
<td>Proportion (%) of modalised constructions.</td>
</tr>
<tr>
<td><strong>Utility</strong></td>
<td>Helps comparisons by normalising for the complexity of the constructions in the sample.</td>
<td>Corrects for heavily modalised constructions in the sample.</td>
</tr>
</tbody>
</table>

(Gabrielatos, 2010)
Modal Load of subordinate part
What about separating *if*-conditionals into Direct and Indirect?
Modal Load of subordinate part

- if-cnd_S_DIR
- as_if_S
- if-q_S
- even_if_S
- if-cnd_S_IND
If only it was that simple [A0L 3233]

• It would be better, it might even be bearable, if only he knew what had become of James. [A0N 2403]
  – *if only* = conditional + “exclamatory wish” (“intensified equivalent of if”) (Quirk et al., 1985: 842, 1092)

• Secondly, the increase in world oil prices has been responsible, if only in part, for the increase in prices of many of the products of Western economies. [K94 2062]
  – *if only* = concessive (elliptical/verbless subordinate clause) → *although / albeit* (Quirk et al., 1985: 1004-1005, 1099)
(BE) interested

The seemingly lexical starting point (i.e. the word-form *interested*) cannot be adequately defined without recourse to grammar.

- adjective, rather than as the past tense of the verb INTEREST.

**BE in BE interested**

- copular verb ...
- ... in all its tense-aspect permutations
Verb Collocates $\rightarrow$ Semantic Preference

*BE interested in* + *-ing Clause* vs *BE interested* + *to-inf*

**BE interested in + -ing Clause**
- No particular meaning group is more frequent than others
  - verbs in the complement seem to be topic-specific.

**BE interested + to-inf**
- More than half of verb collocates have meanings relating (directly or indirectly) to knowledge, or actions leading to knowledge (i.e. related to inquiry).
Knowledge-related verbs

Direct
• determine, discover, find out, know, learn, receive (e.g. information), share (e.g. discovery), study, understand.

Indirect
• analyse, assess, check, compare, contrast, discuss, examine, experience, explore, hear, identify, interview, listen, look, monitor, notice, observe, read, research, see, speak, study, talk, test, visit, watch, witness.
## Proportion of knowledge-related verb collocates

<td>12.5</td>
<td>21.5</td>
</tr>
</tbody>
</table>
Limitations of collocation as ‘purely lexical’

• A collocation analysis of the word-form *interested* would mainly return collocates of *interested* in its most frequent word class, and in the most frequent syntactic patterns the word is found.

• Collocation and the resulting semantic preferences are *lexicogrammatical* features.

• Every instance of language use is *lexicogrammatical*
Compartmentalisation

• RefMats and PedMats: grammars - dictionaries
• However, pedagogical grammars and dictionaries overlap in their coverage
  – grammars also provide lexis-like information
  – dictionaries also provide grammar-like information.

• There is no single source which provides all the lexicogrammatical information that a learner may need in order to form a comprehensive picture of use.
  – Consulting a single pedagogical source cannot be expected to be sufficient, and learners would be wise to combine sources, in particular grammars and dictionaries.
Compartmentalisation

• **interested**: Learner use seems to correlate with the information in pedagogical grammars rather than dictionaries.
  – Lexicogrammatical patterns tend to be presented to learners as grammatical points and/or
  – Dictionaries are treated as sources for the meaning of words rather than their use

• Coursebooks have potential for integrated treatment. However ...
• Not only compartmentalised, but also confusing / misleading.

From compartmentalisation to pedagogical lexicogrammars

• Researchers have the knowledge and skills to combine information, ...
• ... but this seems too much to expect from learners.
• Compartmentalisation (with overlaps in coverage) seems practical/inevitable when thinking of hard-copy publications, due to size/cost limitations ...
• ... but online publishing offers possibilities for more comprehensive learner resources that combine the features of pedagogical grammars and dictionaries.
Pedagogical Lexicogrammars

- Learners could access language information starting at any point of the lexicogrammar continuum, ...
- ... and move back and forth combining the information they access.

Example
Learner looking up interested to check possibilities/accuracy of use - i.e. starting at the lexis-end of the continuum – will find...

- dictionary-like information -- but also ...
- links to adjective complementation patterns, and complementation in general (the grammar end),
- information on the types of verbs specific to particular patterns (more towards the lexis end)
- issues of modal marking (around the middle).
Pedagogical Lexicograms

• Comprehensive
• Combine content of grammars and dictionaries
• Updatable
• Expandable
• Interlinked content
  ⇒ examples of use in different contexts
  ⇒ “serendipity” (Bernardini, 2000)
• For examples of what parts of them might look like see Hunston (2018) and Frankenberg-Garcia et al. (2018)
Conclusions and Suggestions

Overall, TALC tends to
• apply theory
• accept RefMats uncritically
• ‘consume’ findings of primary research in L1

The starting point or focus (lexical or grammatical) should not mislead us to conclude that ...
• the starting point is at the core of the patterns we observed
• should be treated as primary
• any patterns observed can be explained in terms of lexis/grammar only
Conclusions and Suggestions

• Halliday’s (1992: 64) “tunnelling” metaphor may not be entirely useful, as it seems to imply both linearity and directionality in research.

• Lexicogrammatical research cannot be mono-directional: at any given point in the analysis, both grammar and lexis are involved.

• Whether the findings are perceived as lexis-like or grammar-like is a matter of perspective or theoretical orientation.

• Description is theoretical
Lexicogrammar and perspectives: an example

A study may examine the frequency that a semantically-defined group of verbs, is used in the progressive aspect, whereas another study may examine the frequency that the progressive aspect is used with particular verbs.

Despite their different starting points (lexis, grammar), both studies would be essentially examining the same lexicogrammatical item – in a complementary way.
Conclusions and Suggestions

• Whatever the focus and starting point of the analysis, all patterns (and their components) can only be fully defined if both lexical and grammatical aspects are taken into account.

• Studies may temporarily focus (more) on lexical or grammatical aspects, but both need to be re-integrated.
Conclusions and Suggestions

• TALC can, and should, incorporate primary research in L1
  ➞ Critical examination of RefMats
  ➞ Improvement and enrichment of RefMats
  ➞ Improvement of PedMats

• TALC research can contribute to both theory and pedagogy
Current descriptive sources → Examination of L1 use → Better informed descriptive sources → Current pedagogical materials → Examination of pedagogical materials → Better informed pedagogical materials → Learner Use → Examination of learner use

(Gabrielatos, 2018)
The ‘parting shot’

Theories are there to be tested, not applied – and definitely not consumed, parroted, worshipped, or brandished.

(Gabrielatos, 2011)
